

Jan 2008: Release of MIL-STD-461F

MIL-STD-461 is a widely used test standard for military electronics suppliers, due largely to the fact that it covers inter-service operability issues. Approved on December 10, 2007, the newly released [MIL-STD-461F](#) supersedes MIL-STD-461E.

DTB continues to keep pace with both the ever changing environment and the advances in hardware by meeting all the testing requirements in [MIL-STD-461F](#). For more information on how DTB meets all the requirements of all versions of MIL-STD-461, [please click here](#).
