DTB Unveils New Test Facility

Dayton T. Brown Inc. proudly announces the opening of its 100M Indoor, Ballistics Test Firing Range.

Adaptable, our range can be modified to accept the most challenging of firearm test protocols, at varying distance requirements and in different levels of lighting. The installation of a portable environmental chamber gives our customers the ability to perform test firings in extreme environmental conditions. DTB can capture the test results with data acquisition and high speed videography that uses the newest advances in technology.

Testing or training delays due to weather is never an issue inside our range. Its location further ensures that our customers will experience privacy, security and be able to maintain the competitive advantage.

DTB's Ballistic Test Firing Range is available 24/7 for weapons and weapons components development; body armor and helmet testing; transparent and structural armor development testing; vehicle armor and weapons systems testing and more.

In addition, the range is available for rental to customers with firearm training requirements to sworn Police, Law Enforcement and Military personnel, as well as for product demonstrations or product training courses. To supplement training DTB has on-site classrooms and other training areas which can be used in conjunction with the range.
