DTB Gets Approved by DOS for Forced Entry and Ballistic Resistance Testing

Dayton T. Brown, Inc. of Bohemia, NY was certified by the US Department of State (DOS) as a Forced Entry and Ballistic Resistance test facility in early December 2010. By securing the necessary approval from the Bureau of Diplomatic Security, Dayton T. Brown (DTB) can now evaluate the performance of architectural components and systems to meet rigorous guidelines for use in State facilities in CONUS and abroad

With more than 60 years experience, DTB has provided a myriad of testing services to commercial and government clients alike, including, environmental, ballistic, metallurgical, optical, dynamic, electrical and structural testing, as well as conformance inspections and design and program engineering. With a wealth of engineering and test experience, DTB was able to successfully meet the stringent requirements by State to support the rigorous SD-STD-01.01 testing standards for Forced Entry and Ballistic Resistance of Structural Systems.

FEBR testing is conducted on doors, windows, deal trays, hatches, panels, louvers and grilles. Among the 24/7 services offered to support FEBR, Dayton T. Brown employs an indoor 100m range, concentrated assault teams, and a full service ballistics laboratory – all under one roof. Additionally, DTB offers ballistic resistance testing on armor and armored vehicles to ATPD 2352 standards.

To receive more information on capabilities, services, or accreditations, please visit DTB's website at www.dtbtest.com/Forced-Entry.aspx or to request testing, contact [Haim Gurewich](#).
